BIOCHEMISTRY

Amylase, Fluid <i>Sample: Fluid</i> <i>Method: Spectrophotometry-IFCC P-Nitrophenol</i>	45.0	Not Defined	U/L
--	------	-------------	-----

Amylase, Fluid

Clinical Significance :

" Elevated total serum amylase does not specifically indicate a pancreatic disorder since it is also produced by the salivary glands, mucosa of the small intestine, ovaries, placenta, liver, and the lining of the fallopian tubes. However, levels are very high in acute pancreatitis (up to 6 times higher than normal). Levels rise within 12 hours of onset of acute pancreatitis and persists for up to 3 to 4 days. Elevated levels may also be seen in mumps, salivary duct obstruction, ectopic pregnancy, and intestinal obstruction/infarction."
