Calcium, 24 Hrs Urine

# Urine Calcium Sample: 24Hrs. Urine Method: Spectrophotometry / OCC	50	Undefined	mg/dL
# Total Volume Sample: 24Hrs. Urine	2500		ml
# Urine Calcium 24Hrs Sample: 24Hrs. Urine Method: Calculated	1250.00 H	100.00 - 321.00	mg/24 hrs

Calcium, 24 Hrs Urine

Clinical Significance :

"Increased urinary calcium excretion (hypercalciuria) is associated with kidney stone disease and osteoporosis. Other causes of hypercalciuria include hyperparathyroidism, Paget disease, prolonged immobilization, vitamin D intoxication, and diseases that destroy bone (such as metastatic cancer or multiple myeloma). Urine calcium excretion is also used to assess the adequacy of calcium and vitamin D supplementation."
