Glucose Post-Prandial

COMMENTS / INTERPRETATION:

Any of the following results, confirmed on a subsequent day, can be considered diagnostic for diabetes:

- Fasting plasma or serum glucose \geq 126 mg/dL after an 8-hour fast
- 2-Hour plasma or serum glucose \geq 200 mg/dL during a 75-gram oral glucose tolerance test (OGTT)
- Random glucose \geq 200 mg/dL, plus typical symptoms

Patients with "impaired" glucose regulation are those whose fasting serum or plasma glucose fall between 101 and 126 mg/dL, or whose 2-hour value on oral glucose tolerance test fall between 140 and 199 mg/dL. These patients have a markedly increased risk of developing type 2 diabetes and should be counseled for lifestyle changes and followed up with more testing.
