BIOCHEMISTRY

# Fructosamine	276.0	205.0 - 285.0	µmol/L
<i>Sample: Serum</i>			
<i>Method: NBT, Colorimetric</i>			

Fructosamine

Fructosamine provides information about the average glucose concentration over last 2-3 weeks (as against HbA1c which gives the average glucose concentration over last 8-10 weeks).

Increased levels of Fructosamine are associated with raised blood glucose levels over last 2-3 weeks.

Normal levels indicate either the patient is non-diabetic or that diabetic control is good.

Low levels must be correlated with decreased protein level, increased protein loss or change in body protein.
