Immunoglobulin M (IgM)

COMMENTS / INTERPRETATION :

- Immunoglobulins are formed by plasma cells as a humoral immune response to contact of the immune system with antigens.
- The primary reaction after the initial contact is the formation of antibodies of the IgM class followed later by IgG and also IgA antibodies.
- Levels of IgM are useful in the diagnosis of hereditary and acquired IgM immunodeficiencies, Waldenstroms macroglobulinemia and earliest immunoglobulin serological diagnosis of infectious diseases.
