Protein, 24 Hrs Urine			
# Urine For Protein <i>Method: Turbidimetric</i>	45.9 H	0.0 - 14.0	mg/dL
# Total Volume <i>Sample: 24Hrs. Urine</i>	2600		ml
# 24 Hrs Urine Protein <i>Sample: 24Hrs. Urine</i>	1193.40 H	<150.00	mg/day

Protein, 24 Hrs Urine

Clinical Significance :

Protein appears in urine in various kidney disorders like glomerulonephritis, nephrotic syndrome, urinary tract inflammation, tumours of the urinary tract and interstitial nephritis as well as in conditions where plasma concentration of proteins are increased like multiple myeloma and myoglobinuria. Hyperparathyroidism leads to hypercalcemia, hypophosphatemia, hypercalcuria and hyperphosphaturia. Hypoparathyroidism is mostly seen after thyroid surgery or due to an autoimmune cause.
