BIOCHEMISTRY

Alpha-Fetoprotein (AFP) <i>Sample: Serum</i> <i>Method: ECLIA</i>	15.00 H	0.00 - 7.00	ng/mL
--	---------	-------------	-------

Alpha-Fetoprotein (AFP)

Clinical Significance :

Alpha-fetoprotein (AFP) is produced in early fetal life by the liver and by a variety of tumor cells. Elevated AFP levels are seen in hepatocellular carcinoma, hepatoblastoma, nonseminomatous germ cell tumors of the ovary and testis. AFP is elevated during pregnancy and raised levels can rarely persist in the mother. Neonates have markedly elevated AFP levels that rapidly fall by 5 months and reach baseline in about a year. Mildly elevated levels are also seen in some conditions like benign liver disease (eg, viral hepatitis, cirrhosis), gastrointestinal tract tumors and, along with carcinoembryonic antigen in ataxia telangiectasia.
