**BIOCHEMISTRY**

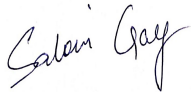

# CA 15-3 Sample: Serum Method: ECLIA	45.0 H	<30.0	U/mL
---	--------	-------	------

**CA 15-3**

Clinical Significance :

Elevation of CA 15-3 values are usually seen in breast cancer patients, but may also be seen in malignancies of lung, colon, pancreas, primary liver, ovary, cervix, and endometrium. Serial testing of CA 13 is useful as a follow up test to detect cases of disease recurrence in previously treated stage II and III breast cancer patients. It is also used to monitor response to therapy in metastatic breast cancer patients. Increasing and decreasing values correlate with disease progression and regression, respectively.
