Report Status - Final

Test Name	Result	Biological Ref. Interval	Unit
-----------	--------	--------------------------	------

BIOCHEMISTRY

CA 19-9 <i>Sample: Serum</i> <i>Method: ECLIA</i>	82.00 H	<37.00	U/mL
--	----------------	--------	------

CA 19-9

Clinical Significance :

CA 19-9 level is raised in gastrointestinal malignancies such as cholangiocarcinoma, pancreatic cancer, or colon cancer. Benign conditions such as cirrhosis, cholestasis, and pancreatitis may also lead to mild to moderately raised serum CA 19-9 level. Serial monitoring of carbohydrate antigen 19-9 (CA 19-9) should begin before therapy is started to verify post-therapy decreases in CA 19-9 and to establish a baseline for evaluating possible recurrence.

** End of Report**
