BIOCHEMISTRY

# Digoxin (Lanoxin)	1.60 H	0.60 - 1.20	RFV
<i>Sample: Serum</i>			
<i>Method: ELFA</i>			

Digoxin (Lanoxin)

1. Digoxin is a cardiac glycoside most widely used in the treatment of heart failure and disturbances of cardiac rhythm.
2. Digoxin has a narrow therapeutic range, with toxic effects seen at concentrations in plasma or serum above 2ng/ml
3. Sera should be collected 6-8 hrs after a dose is administered to allow adequate time for equilibration of digoxin levels between serum and tissue.
4. Serum from pregnant women, neonates and patients with liver or kidney failure may contain digoxin like immuno-reactive factors which can cause elevated digoxin levels.
5. The assay results should be considered taking into account the patient's history, clinical signs and symptoms as well as observing for toxicity.
