Test Name	Result	Biological Ref. Interval	Unit
-----------	--------	--------------------------	------

**BIOCHEMISTRY**

<b>Folic Acid</b> <i>Sample: Serum</i> <i>Method: ECLIA</i>	5.2	3.1 - 17.5	ng/mL
---	-----	------------	-------

**Folic Acid**

**Clinical Significance :**

Serum folic acid levels fall soon after dietary folate intake is reduced and may be low in the presence of normal tissue stores. Significant folate deficiency is associated with macrocytosis and megaloblastic anemia. Low levels serum folic acid is also seen in neuropsychiatric disorders, in pregnant women whose fetuses have neural tube defects, in women who have recently had spontaneous abortions, in alcoholics, liver disease, hemolytic disorders, malignancies and in rare inborn errors of metabolism.
