SEROLOGY

HIV Early Screen (HIV 1&2 Antibody, HIV P24 Ag)

HIV P24 Antigen

Sample: Serum

Method: Immunochromatography

Negative

Negative

HIV 1 & 2 Antibodies (CMIA Qualitative)

Sample: Serum

Method: CMIA

Non Reactive

< 1.00 : Non Reactive
>= 1.00 : Reactive

HIV 1 & 2 Antibodies (CMIA Qualitative)

Interpretation:

The assay is a chemiluminescent microparticle immunoassay (CMIA) for the simultaneous **Qualitative detection** of human immunodeficiency virus (HIV) p24 antigen and antibodies to HIV type 1 and/or type 2 (HIV-2) in human serum and plasma .

The presence or absence of HIV-1 p24 antigen or HIV-1/HIV-2 antibodies in the specimen is determined by comparing the chemiluminescent signal in the reaction to the cutoff signal (S/CO) determined from an ARCHITECT HIV Ag/Ab Combo calibration.

The ARCHITECT HIV Ag/Ab Combo assay result and supplemental assay results should be interpreted in conjunction with the patient's clinical presentation, history, and other laboratory results. If the results are inconsistent with clinical evidence, additional testing is suggested to confirm the result.

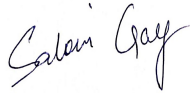

In case of Reactive results further confirmation with molecular testing/ HIV Western blot is advised
