Insulin Fasting <i>Sample: Serum</i> <i>Method: ECLIA</i>	5.60	2.60 - 24.90	μU/mL
--	------	--------------	-------

Insulin Fasting

Clinical Significance :

Insulin is a hormone produced in the pancreas and it regulates the uptake and utilization of glucose. Type 1 diabetes (insulin-dependent diabetes) is caused by insulin deficiency due to destruction of insulin-producing pancreatic islet cells. Type 2 diabetes is characterized by insulin resistance. Insulin levels may be increased in patients with pancreatic beta cell tumors (insulinoma). Insulin levels generally decline in patients with type 1 diabetes mellitus. In the early stage of type 2 diabetes, insulin levels are either normal or elevated. In the late stage of type 2 diabetes, insulin levels decline.
