**CLINICAL PATHOLOGY**

<b>Semen Fructose</b> <i>Sample: Semen</i> <i>Method: Seliwanoffs</i>	<b>Not Detected</b>	<b>Detected</b>
---	---------------------	-----------------

**Semen Fructose**

Clinical Significance :

Fructose is produced in the male reproductive tract by the seminal vesicles and is released into the semen during ejaculation. It is the energy source for sperm motility. Fructose is present in a normal semen sample. A fructose negative azoospermatic sample may indicate an absence of the seminal vesicles, absence of the vas deferens in the area of the seminal vesicles, or an obstruction at the level of the seminal vesicles.
