Name	: Mrs. SE215	Billing Date	: 07/07/2023 12:36:20
Age	: 30 Yrs	Sample Collected on	: 10/07/2023 10:01:31
Sex	: Female	Sample Received on	: 10/07/2023 11:02:13
P. ID No.	: P1000100013110	Report Released on	: 17/07/2023 17:20:48
Accession No	: 10002305166	Barcode No.	: 10002305166-01
Referring Doctor	: Self		
Referred By	:	Ref no.	:

Report Status - Final

Test Name	Result	Biological Ref. Interval	Unit
-----------	--------	--------------------------	------

SEROLOGY**Toxoplasma IgG Avidity**

54.0

Low Avidity : < 30
Medium Avidity : 30-40
High Avidity : > 40

%

Sample: Serum
Method: EIA**Toxoplasma IgG Avidity****Interpretation:**

- *Pathogen specific IgG Avidity testing is useful to discriminate between past infection (usually more than 3 months) and recent infection (as reinfection or reactivation).
- * Following antigenic challenge the IgG antibodies produced initially bind weakly to the antigen, which results in low avidity reaction. As the immune response develops there is maturation of IgG antibody response and the avidity increases progressively over weeks or months, which results in high avidity reaction.
- * All results need correlation with the clinical history of the patient (including date of symptom onset, contact with known cases, history of immunisation wherever applicable)
- * In cases with low titres or absence of pathogen specific IgG, the avidity testing is not indicated.

** End of Report**
