**SEROLOGY****Toxoplasma IgM Antibodies**

45.00 H

Negative : < 6  
Equivocal : 6 - 8  
Positive : > 8

AU/mL

Sample: Serum  
Method: ECLIA**Toxoplasma IgM Antibodies****Interpretation**

Negative	Presumed not to have had active Toxoplasmosis infection.
Equivocal	May be due to low levels of IgM antibodies. These results should be retested with a second sample after 2 3 weeks, if clinically indicated.
Positive	Indicates active Toxoplasmosis.

**Clinical Significance:**

● Nonreactive results do not preclude recent primary Toxoplasma gondii infection. A suspected diagnosis of acute toxoplasmosis should be confirmed by detection of Toxoplasma gondii nucleic acid in cerebrospinal fluid or amniotic fluid by PCR.
