SEROLOGY

# Varicella Zoster Virus (VZV) IgG Antibodies (Chicken Pox) <i>Sample: Serum</i> <i>Method: ELFA</i>	10.00 H	Negative: <0.60 Equivocal: >= 0.60 - <0.90 Positive: >=0.90	RFV
--	---------	---	-----

**Varicella Zoster Virus (VZV) IgG**

Negative : Presumed not to have had a specific immune response to immunization or no prior exposure to the varicella zoster virus (VZV).  
Borderline: It is recommended to repeat the test with a second sample after 2-4 weeks to demonstrate IgG seroconversion if recently vaccinated or if clinically indicated.  
Positive : Indicates prior exposure to the VZV through infection or immunization. Individuals testing positive are considered immune to Varicella Zoster Virus.

Clinical Significance:

• IgG antibodies to varicella zoster virus may be present in serum specimens from individuals who have received blood products within the past several months, but have not been immunized or experienced past infection with this virus.
