SEROLOGY

Viral Markers (Rapid Card)

HIV Antibody, Rapid Card

Sample: Serum

Method: Immunodot Assay

Non Reactive

Non Reactive

Hepatitis B Surface Antigen (HBsAg) Rapid Card

Sample: Serum

Method: Immunochromatography

Non Reactive

Non Reactive

Hepatitis C Antibody (HCV), Rapid Card

Sample: Serum

Method: Immunodot Assay

Non Reactive

Non Reactive

HIV Antibody, Rapid Card

Clinical Significance :

HIV Rapid test is a qualitative test used to screen for antibodies against HIV 1 and 2 viruses. As per NACO guidelines, all positive samples should be tested by using 3 different types of kits before report is released.

Hepatitis B Surface Antigen (HBsAg)

Clinical Significance :

Hepatitis B surface antigen (HBsAg) is the first serologic marker appearing in the serum at 6 to 16 weeks following exposure to HBV. In acute infection, HBsAg usually disappears in 1 to 2 months after the onset of symptoms. Persistence of HBsAg for more than 6 months in duration indicates development of either a chronic carrier state or chronic HBV infection.

In case of negative results:

Please note that while rapid test is a sensitive and reliable screening test, it should not be used as a sole criterion for diagnosis. It is recommended to use molecular testing (PCR) for confirmation.

In case of positive results:
