| # Anti NMDA Receptor Encephalitis IgG Antibodies | Negative | Negative |
|--|----------|----------|

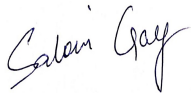

Method: IMMUNOFLUORESCENCE

Anti NMDA Receptor Encephalitis IgG

Interpretation :

Antibodies against glutamate receptor (type NMDA-NRI) are specific marker for anti-glutamate receptor (type NMDA) encephalitis an inflammatory encephalopathic autoimmune disease. NMDA receptors belong to the ionotropic glutamate receptors and were named according to their ability to be activated by the synthetic amino acid N -methyl - D -aspartate (NMDA). They are localised in the post -synaptic membrane and from cation channels with major significance for synaptic transmission and plasticity.
